SUMMARY

Software architect and engineer. On the core team at Incutec, an open-source startup, I built the multi-region, highly available infrastructure and CI/CD behind the company's projects, starting with Open Drone, and the management app that runs the company, and moved the application from Python to Go. Before that, over two years building a multi-tenant ERP and e-invoicing platform used by ~200 Italian companies: designed and led the modular .NET 8 API replacing its legacy core (clean architecture, CQRS, GraphQL and REST over PostgreSQL, Roslyn source generators that cut new-entity code from 10+ files to ~4). Oracle Cloud certified. Working alongside a Computer Engineering degree at Politecnico di Torino. Based in Leuven, EU citizen, open to hybrid or remote roles.

How I work: leave it legible. The API ships with architecture docs and code generators, so the next developer can extend it without me in the room.

EXPERIENCE

Incutec — Leuven, Belgium · Hybrid

System Architect & Engineer · Core team — Oct 2026 – Present

- Designed and built the whole infrastructure for the company and its projects, the first being Open Drone: a highly available, multi-region deployment across several VPS, defined as code and run in Docker containers.
- Set up the CI/CD servers and automated testing, so every change is built, tested and shipped without manual steps.
- Set up ticket handling and built Incutec's management app, which runs the company and all of its projects.
- Led the refactor of the application from Python to Go for faster deploys and a faster app, and cut cost and delivery time.

Leonardo Web S.r.l. — Piedmont, Italy · Remote

Full-Stack Software Engineer — Feb 2025 – Sep 2026

Software Engineering Intern — Jul 2024 – Jan 2025

Part-time during term (20 h/week), full-time in summers, alongside the degree.

- Designed ~90% of the architecture and led development of the modular .NET 8 API replacing the legacy ASP.NET backend of a multi-tenant ERP and e-invoicing platform used by ~200 Italian companies. Live in production, serving authentication (Argon2id password hashing) and the full accounting module; all entities move over by end of 2026.
- Built database-per-customer multi-tenancy behind a YARP gateway that routes each request by JWT claim to per-customer hosts, so customer-specific features (7 customization modules) ship without redeploying the shared API.
- Wrote 12 Roslyn source generators (command handlers, validators, GraphQL queries, HotChocolate filter and sort types) plus analyzers and code fixes that enforce the architecture, cutting a new entity from 10+ hand-written files to ~4.
- Hardened the PostgreSQL schema (missing primary keys, foreign keys and indexes) across ~200 customer databases, with middleware that migrates each customer's database on its first request.
- Built Blazor templates for export prints and an observability dashboard for the API.
- Onboarded and mentored new developers as the team grew from 2 to 5: assigned tasks, paired on the codebase, and wrote the architecture documentation new hires start from; built the API's xUnit test suite for handover.
- Handled production support (tickets, bug fixes, customer calls) under ISO 9001 and ISO 27001 procedures.

Maggioli S.p.A. — Italy

Software Development Intern — 2023

- One-month school work placement (PCTO): shipped fixes and features across frontend and backend.

Software Development Intern — 2022

- One-month school work placement (PCTO): built a log aggregator for all company projects and a metrics system, mostly backend with some frontend.

PROJECTS

lorenzomarchisio.me · Personal website

Mar 2025 – Present

- Astro site on Cloudflare Pages with a server-side contact API (Resend, per-IP rate limiting, honeypot) and an automated photo pipeline: Swift watermarking, WebP encoding, EXIF and GPS stripping, thumbnails. CI/CD with GitHub Actions.

Multi-account email client · Diploma project

2024

- Flutter mobile app and Angular + Tauri desktop app, with all mail logic (IMAP/SMTP send and receive) written in Rust. OAuth sign-in; Gmail, iCloud and custom IMAP/SMTP accounts.

SKILLS

Backend: C#, .NET 8, ASP.NET Core, EF Core, SQL, PostgreSQL, clean architecture, CQRS (MediatR), multi-tenancy, YARP, Roslyn source generators, GraphQL (HotChocolate), REST/OpenAPI

Web and mobile: TypeScript, JavaScript, Angular, React, Astro, Blazor, Tailwind CSS, Bootstrap, shadcn/ui, Flutter

Cloud and DevOps: Docker, Infrastructure as Code, CI/CD (GitHub Actions), high availability, multi-region VPS, Cloudflare, Linux, Git, Oracle Cloud (certified) · **Testing:** xUnit, Playwright

AI-assisted development: Claude Code, OpenAI Codex for research, documentation and automating repetitive work

EDUCATION

BSc Computer Engineering · Politecnico di Torino

2024 – 2028 (expected)

IT Diploma · IIS G. Vallauri, Fossano · 86/100

2019 – 2024

CERTIFICATIONS

Oracle Cloud Infrastructure 2025 Certified Architect Associate · Oracle · Sep 2025

Oracle Cloud Infrastructure 2025 Certified Foundations Associate · Oracle · Sep 2025

Cambridge B2 First · Cambridge English · 2024

LANGUAGES

Italian: native · **English:** fluent, full professional proficiency (Cambridge B2 First)

ACHIEVEMENTS AND VOLUNTEERING

Gara Nazionale di Informatica, national finalist · 2023. Selected through my school's qualifying round for the national computer science competition: 25 students from technical schools across Italy solving system design and coding problems.

TEDxKULeuven, volunteer crew · 2026. Venue setup, event video recording, guest handling.

Volunteer, High Tech Lab Maakleerplek · Oct 2026 – Present. Help visitors bring their projects to life, from laser cutting and 3D printing to electronics, by guiding them through the machines and solving problems along the way, and help keep the lab stocked, clean and running.

Broadcast Crew – POV Camera System, 24urenloop Leuven · Oct 2026. On the live broadcast team of the 24-hour student relay run, I helped design and build a mobile camera system worn by runners for a first-person view of the race, set up our part of the broadcast tent, got runners wearing the cameras in sync with the main tent, and helped take everything down afterwards.

PHOTOGRAPHY

Motorsport, football and travel photographer. 130+ photos published at lorenzomarchisio.me/gallery through my own publishing pipeline.
